# Finding the whole – adding together

## Discover

① **a)** How many 🎳 are left up?

How many 🎳 are knocked over?

How many 🎳 are there **altogether**?

b) 1 more 🎳 is knocked over.

Now there are 5 🎳 left up and 5 🎳 knocked over.

How many 🎳 are there altogether?

Share

There are two parts.

To **add** we need to put the two parts together and count the whole.
a)

There are 6 🎳 left up.

There are 4 🎳 knocked over.

There are 10 🎳 altogether.

$6 + 4 = 10$

b) There are 5 🎳 left up.

There are 5 🎳 knocked over.

There are 10 🎳 altogether.

$5 + 5 = 10$

Think together

1. How many 🎳 are there **in total**?
$3 + 4 = \boxed{}$
There are $\boxed{}$ 🎳 in total.

> In total also means the two parts added together.

2. How many 🎳 are there in total?

$\boxed{} + \boxed{} = \boxed{}$

There are $\boxed{}$ 🎳 in total.

CHALLENGE

3. How many in total?

Use ◯ to help you.

5   2
$\boxed{5} + \boxed{2} = \boxed{}$

> Can you write this addition in other ways? There are 3 more.

> I know **plus** (+) means add the parts.
