

## Finding the whole – adding more

### Discover

- 1 a) 2 are added to the jar.  
How many are in the jar now?
- b) 3 more are added.  
How many are in the jar now?

### Share

a)

I will start with the 5 in the jar and then add 2 more.

I can **count on** from 5. Start at 5 and then count on ... 6 ... 7.

There are 5 in the jar.

2 more are added.

$$5 + 2 = 7$$

There are 7 in the jar now.

**b)** 3 more are added.

$7 + 3 = 10$

There are 10 in the jar now.

### Think together

- 1** There are 6 in the jar.
- 2 more go in the jar.
- How many are in the jar now?

$6 + \square = \square$

There are  $\square$  in the jar now.

- 2** There are 5 in the jar. 3 more go in.
- How many are in the jar now?

$\square + \square = \square$

There are  $\square$  in the jar now.

- 3** Use a number line to work out  $2 + 7 = \square$

I know that  
 $2 + 7 = 7 + 2$ .

Which number should you count on from? Why?
